NOTICE

NOTICE TO ALL EMPLOYEES AND PUBLIC NOTICE OF INTENT TO FILE APPLICATION FOR PERMANENT ALIEN EMPLOYMENT CERTIFICATION

Pursuant to Section 20 CFR 656.20, you are hereby notified that an application for permanent alien employment certification is being filed for the following position:

Higuchi Biosciences Center seeks an Assistant Research Professor. This position will involve conducting basic and applied research in the area of immunology, immunological methods, and animal models of enteric infections. The incumbent will be expected to develop an independent research program and serve as a principal investigator on proposals to external agencies and to become engaged in the academic and scholarly activities of the Department of Pharmaceutical Chemistry. These activities include, but are not limited to, performing collaborative research with academic faculty, supervising students at all levels in their research, serving on research related departmental and/or college committees, and organizing, attending, and presenting at professional conferences and seminars. Job Duties: 40% Conduct basic and/or applied research that involves generation of vaccine formulations that can be tested with suitable adjuvants in multiple animal models, molecular basis for of host/pathogen interactions, direction of graduate and undergraduate students and the rigorous pursuit of external funding.

20% Direct the Immunology Core Laboratory established as part of the Kansas Vaccine Institute. 10% Collaborate with other faculty in the Department of Pharmaceutical Chemistry, along with faculty from across the University in cutting edge interdisciplinary research. 10% Contribute to the graduate/postgraduate training mission of the department, including participate in graduate training and the mentoring and professional development of graduate research students and postdoctoral fellows. 10% Participate in the training of undergraduate students in the lab including promoting undergraduate research. 5% Participate in the regular department seminar series and strive to advocate the department research mission by presenting research at professional meetings and through invited seminars. 5% Take part in other activities that are at the core of the Department's overall mission including outreach, in-house service and professional service.

$60,000-$65,000 per/year

Required Qualifications:

1. Ph.D. or equivalent terminal degree in the area of microbiology, molecular genetics, biochemistry, immunology or a suitably-related field in the biological sciences.
2. At least two years of postdoctoral experience in the generation of subunit vaccine formulations and the analysis of immune responses to these vaccines.
3. A record of publication in peer-reviewed journals as evidence of scholarly achievement.
4. Demonstrated research productivity in one or more areas related to the development of bacterial subunit vaccines targeting the specialized type III secretion system is required.
5. Demonstration of an interdisciplinary approach to research.
6. Experience in the preparation of proposals for the acquisition of internal and/or extramural research funding.
7. Experience in the use of FACS, ELISpot MSD plate reader systems and other specialized instrumentation for detailed analysis of mammalian immune responses is essential.
